

Axial Check Valve "CKR"

Application:

The axial check valve has been designed to avoid the backflow in gas lines

Versions:

- with welding ends
- with flanges (RF or RTJ type)

Sizes:

- 1" (DN 25) up to 56" (DN 1400)
- pressure class ANSI 150 up to ANSI 1500

Check valve in closed position

Check valve in open position

Axial Check Valve "CKR"

Axial Check Valve "CKR"

Check valve overview

Hard faced stainless steel
Disc: 1.4502 (X8CrTi18)
Body: 1.4115 (X20CrMo17-1)

Detail sealing area

Design Features:

RMA axial check valves type „CKR“ are fully welded.

- the body and the disc are designed for a pressure loss as small as possible.
- the spring is designed for a quick reaction in case of flow changes.
- the sealing is metal-to-metal with hard faced stainless steel sealing surfaces.
- a buffer system is integrated to avoid noisy closing (opening)
- the dimensions are acc. to API 6D

Axial check valves are designed for horizontal position. Vertical position is possible by using a special spring.
