

Pig trap

Pig trap

RMA designs and manufactures complete launching and receiving traps for pipeline construction in almost every size and pressure rating, for gas and oil service, combining the relevant specifications, customer requirements and the know-how gathered over many years of trap construction.

Our standard design matches all common pigs such as separation pigs, measuring pigs and cleaning pigs.

Quick and smooth pigging is guaranteed by the perfect arrangement and dimensioning of the various nozzles, for example by-pass, drain and vent nozzles.

All traps are equipped with RMA quick closures and can, on request, be supplied with the corresponding pig transport device, the pig trolley.

Manufacturing program

Sizes		Pressure ratings	
From	up to	From	up to
DN 80	DN 1400	PN 4	PN 400
DN 3"	DN 56"	ANSI 150	ANSI 2500
